

When Business Central Is No Longer Enough for Enterprise Scale

Business Central helped you grow. SAP S/4HANA may help you scale what comes next.

Dynamics 365 Business Central is a strong ERP for growing and mid-market businesses. For many organizations, it remains the right platform. SAP S/4HANA becomes worth evaluating only when growth, governance, global scale, or operational complexity begins to exceed a mid-market ERP model.

This switch makes sense when

- Multiple entities, regions, currencies, or compliance models are expanding.
- Finance needs stronger consolidation, controls, auditability, and governance.
- Supply chain, procurement, warehouse, or manufacturing needs are becoming more complex.
- Reporting depends on Excel, Power BI, custom reports, and third-party pulls.
- Extensions, integrations, or customizations are becoming hard to manage.
- Leadership wants enterprise standardization and scalable process discipline.

This switch may not be right when

- Business Central is meeting core business needs.
- The main issue is support, reporting, training, or partner responsiveness.
- You need automation or integrations, not a full ERP transformation.
- Budget, timeline, or change capacity is limited.

Comparison snapshot

Business Central today	SAP S/4HANA opportunity
Strong mid-market ERP	Enterprise digital core
Flexible Microsoft environment	Standardized global operating model
Extensions fill process gaps	Fit-to-standard and clean-core approach
Good for moderate complexity	Built for scale, governance, and operational depth
Reporting often relies on surrounding tools	Enterprise visibility across finance, supply chain, and operations

What this means for leaders

CEO

Move from growth-stage ERP to enterprise-scale operating discipline.

CFO

Strengthen governance, consolidation, controls, and reporting confidence.

CTO/CIO

Rationalize extensions, modernize integrations, and reduce architectural complexity.

How Korcomptenz helps

Korcomptenz helps determine whether SAP S/4HANA is the right next move – or whether optimization within the Microsoft ecosystem is enough. We assess readiness, fit-gaps, data, integrations, reporting, process alignment, and change impact.

Assessment-first, not rip-and-replace

SAP S/4HANA is not the right path for every Dynamics customer. Korcomptenz helps evaluate platform fit, process readiness, data quality, integrations, reporting needs, business risk, and change capacity before defining the roadmap.
