

# When GP Can No Longer Support Enterprise Finance

GP helped manage the back office. SAP S/4HANA can connect finance to the enterprise.

Dynamics GP has long served finance-led organizations. For many GP customers, Business Central may be the natural modernization path. SAP S/4HANA becomes relevant when accounting-centric ERP must evolve into enterprise finance and operations. GP product support and updates end December 31, 2029; security patches continue until April 30, 2031.

## This switch makes sense when

GP is surrounded by spreadsheets, ISVs, manual reconciliations, and bolt-ons.

Finance needs enterprise consolidation, controls, compliance, and auditability.

Procurement, inventory, manufacturing, or service needs deeper ERP integration.

Reporting is slow, manual, or disconnected from operational systems.

Multiple entities, currencies, or regions are increasing complexity.

Leadership wants finance to be part of broader enterprise transformation.

## This switch may not be right when

GP is primarily used for straightforward finance.

Business Central can meet finance and operations requirements.

You mainly need cloud finance modernization with lower disruption.

The organization is not ready for process redesign.

## Comparison snapshot

Dynamics GP today	SAP S/4HANA opportunity
Accounting-centric ERP	Enterprise finance and operations platform
Strong historical back-office use	Cross-functional process integration
Dependent on ISVs and spreadsheets	Standardized workflows and embedded controls
Manual reconciliations and reporting gaps	Real-time financial and operational visibility
Defined support runway	Future-ready ERP foundation

## What this means for leaders

### CEO

Move from disconnected back-office systems to an enterprise platform for scale.

### CFO

Strengthen governance, reporting, consolidation, compliance, and control.

### CTO/CIO

Reduce dependency on legacy integrations, ISVs, and manual data movement.

## How Korcomptenz helps

Korcomptenz helps GP customers evaluate whether they need Business Central, Dynamics 365 Finance & Operations, or SAP S/4HANA. For enterprise transformation, we assess finance structures, reporting dependencies, integrations, data readiness, and process alignment.

### Assessment-first, not rip-and-replace

SAP S/4HANA is not the right path for every Dynamics customer. Korcomptenz helps evaluate platform fit, process readiness, data quality, integrations, reporting needs, business risk, and change capacity before defining the roadmap.
