

Build the Healthcare Data Foundation AI Depends On

How Altiares helps provider CIOs modernize data, strengthen governance, improve interoperability, and prepare for responsible AI.

Healthcare CIOs are under pressure to modernize data platforms, improve interoperability, strengthen governance, reduce technical debt, and prepare the enterprise for AI. At the same time, they must support better clinical, operational, financial, and patient outcomes without adding more complexity to the technology landscape. Most provider organizations already have the systems they need, including EHR, imaging, revenue cycle, CRM, finance, supply chain, and operational platforms. The challenge is that these systems often operate with fragmented data, inconsistent definitions, siloed reporting models, and limited trust across teams.

Altiares Healthcare Intelligence helps CIOs create a governed intelligence layer across healthcare data domains, making existing systems more connected, trusted, and AI-ready.

What Altiares Helps CIOs Do

Unify Fragmented Healthcare Data

Connect clinical, operational, financial, referral, imaging, device, and enterprise system data into one governed healthcare intelligence foundation.

Accelerate Microsoft Fabric and Power BI Value

Extend Microsoft investments with healthcare-specific accelerators, reusable data models, semantic layers, and ready-to-scale analytics patterns.

Strengthen Governance and Trust

Improve data quality, lineage, masking, auditing, access policies, and standardized definitions so teams can work from a trusted source of intelligence.

Improve Interoperability

Support integration across EHR, imaging, revenue cycle, CRM, supply chain, finance, patient access, and other enterprise systems.

Enable Responsible AI

Build the trusted foundation needed for Copilot, predictive analytics, AI-assisted insights, and future agentic workflows.

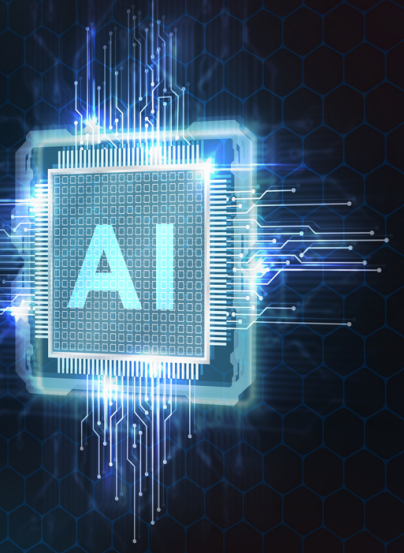

Move From Reporting to Decision Intelligence

Deliver role-based intelligence for executives, clinical leaders, operators, finance teams, and service-line owners so data leads to action.

CIO Outcomes

- ▶ Faster analytics modernization
- ▶ Reduced custom reporting effort
- ▶ Improved data quality and trust
- ▶ Stronger governance and compliance posture
- ▶ Better alignment between IT and business teams
- ▶ Scalable foundation for AI readiness
- ▶ Greater value from Microsoft Fabric, Power BI, Azure, and Copilot
- ▶ Less fragmentation across clinical, financial, and operational analytics

Why It Matters for CIOs

Altiares does not replace the systems provider organizations already rely on. It makes them more connected, governed, and decision-ready.

By creating a trusted healthcare intelligence layer, CIOs can reduce reporting sprawl, improve enterprise data consistency, support responsible AI adoption, and give business and clinical leaders faster access to the insights they need.
