

Augmenting Intelligence, Amplifying Insights

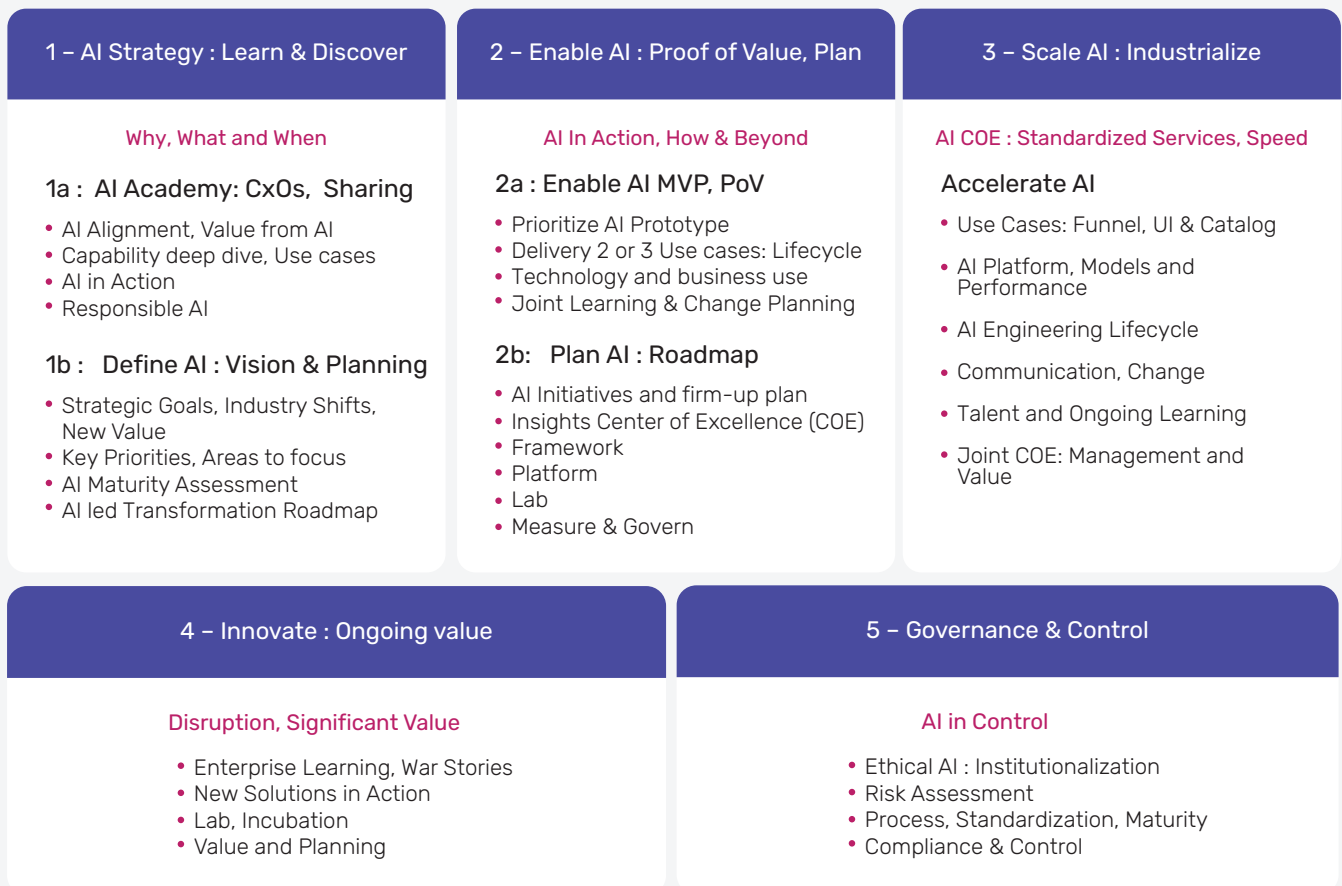

AI and Analytics-powered solutions that #FocusOnYou

We partner with clients in their Insights Journey by delivering Actionable Insights in the hands of End User. Insights and Value can come from a breadth of capabilities – be it Reporting, Data Science, Deep Learning or Generative AI

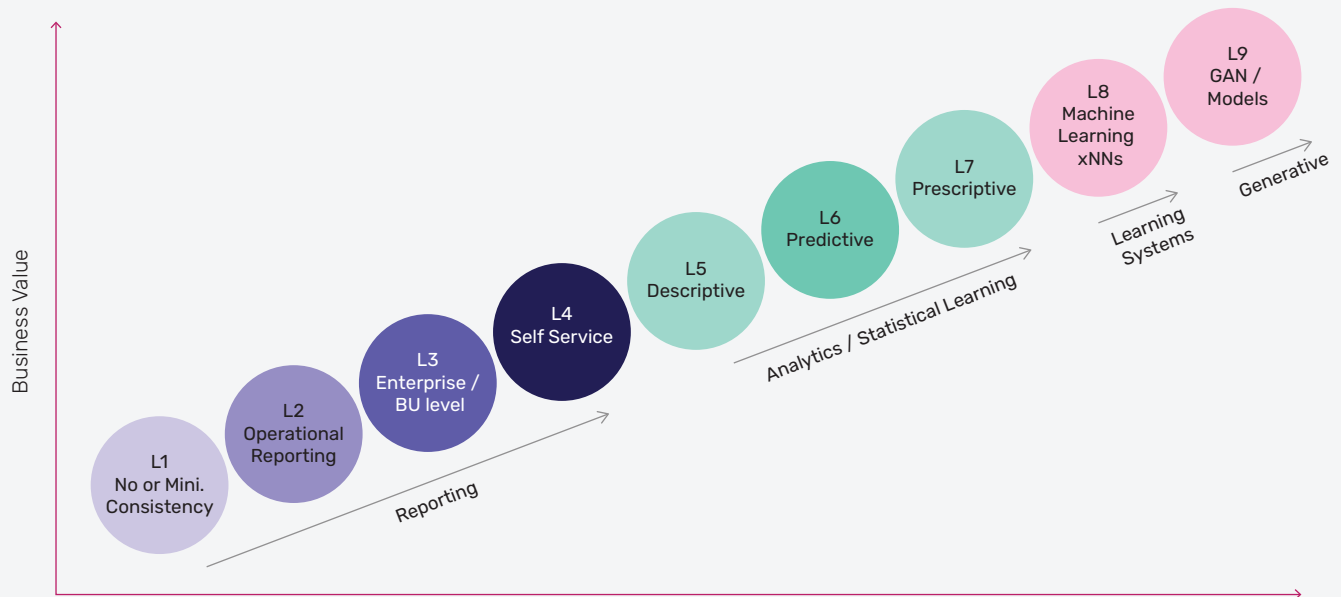

Applied AI (Artificial Intelligence) Services : Path to Value at Scale

The roadmap to generate exponential value and scalability includes determining how AI can align with your strategic business goals and then developing a Proof of Value for paving the future journey to fuse AI into your operations. You can then scale up to engineer AI into standardized services and leverage your learning to develop new, innovative solutions while applying governance mechanisms to assess risks and compliance and create standardized maturity models.

Reporting, AI and Insights

Assess your AI maturity and advance it to achieve superior growth and business transformation by advancing from practice to performance.

We understand that you could be at any point in this journey. We can help you transform irrespective of your state

AI Foundations : Technology, Capabilities and Frameworks

Leveraging next-gen technologies and creating a robust foundation using the right platforms, tools, and frameworks are key to a successful AI-driven transformation.

Technology Enablers

Computer Vision

- Object Recognition
- Image Classification
- People Recognition
- Emotion Detection
- Crowd Detection
- Pattern Detection, Matching
- Pose Estimation

Natural Language

- Topic Recognition, Modeling
- NER : Named Entities, Relationships
- Similarity, Disambiguity
- Sentiment Analysis
- Natural Language Generation
- Machine Translation
- Dialog Systems

Speech

- Text to Speech
- Speech to Text
- Voice Recognition
- Sentiment Analysis
- Translation Services

Forecasting

- Time-Series Forecasting
- Statistical
- Other Models

Generative AI

- Generative using Host of Modalities
- LLMs and Fine Tuning
- Co-pilots

Foundation Enablers

AI Platforms & MLOps

Leading Platform Providers like :

- Azure ML
- Tensorflow
- PyTorch

AI Engineering is a key part for managing Model Lifecycle elements

Application Development Tools

We have team of SMEs that leverage various tools for AI Application / Solutions:

- Notebooks e.g. Jupyter
- Language e.g. Python, Scale
- UI Frameworks like React
- Big Data Integration, Data Lakes
- Visualizations including Niche
- Integration, Services e.g. Rest, Kubernetes

Frameworks & Application

We bring our breadth of Industry capabilities to enable AI Powered Problem Solving:

- Model Performance Measurement e.g. Classification
- Use cases like Connected Retail
- Responsible AI
- Explainability
