

# When NAV Customizations Start Limiting Growth

NAV supported your business for years. SAP S/4HANA can help standardize the next phase.

Dynamics NAV has been a flexible ERP for mid-market organizations. But many environments are now customization-heavy, difficult to upgrade, and dependent on spreadsheets, local process variations, and legacy integrations. NAV 2018 extended support ends in January 2028.

## This switch makes sense when

- NAV is heavily customized and difficult to maintain.
- Multiple entities, sites, countries, or operating models need standardization.
- Manufacturing, warehouse, procurement, or supply chain requirements have outgrown NAV.
- Reporting is fragmented across NAV, Excel, BI tools, and manual extracts.
- Upgrades are risky because of custom code or legacy integrations.
- The business needs stronger governance, compliance, and analytics.

## This switch may not be right when

- NAV processes still fit the business well.
- You mainly need cloud modernization with lower disruption.
- Business Central can meet future-state requirements.
- You want a like-for-like technical migration rather than transformation.

## Comparison snapshot

Dynamics NAV today	SAP S/4HANA opportunity
Flexible but customization-heavy	Standardized enterprise process model
Aging lifecycle and limited innovation runway	Modern ERP foundation with AI and cloud capabilities
Localized process variations	Global process consistency
Custom reports and spreadsheet dependency	Enterprise analytics and real-time visibility
Integration complexity grows over time	SAP BTP-enabled integration and extensibility

## What this means for leaders

### CEO

Replace process fragmentation with scalable enterprise discipline.

### CFO

Improve close, consolidation, auditability, and financial visibility.

### CTO/CIO

Retire legacy customizations, reduce technical debt, and modernize architecture.

## How Korcomptenz helps

Korcomptenz helps NAV customers decide whether Business Central or SAP S/4HANA is the better destination. For SAP-bound organizations, we simplify processes, cleanse data, rationalize customizations, modernize integrations, and map workflows to SAP standards.

### Assessment-first, not rip-and-replace

SAP S/4HANA is not the right path for every Dynamics customer. Korcomptenz helps evaluate platform fit, process readiness, data quality, integrations, reporting needs, business risk, and change capacity before defining the roadmap.
