

AI-Powered SAP Implementation Services

Drive measurable ROI. Reduce risk. Build an intelligent, future-ready core.

Korcomptenz

Total Technology Transformation

SAP Implementation That Starts with the Business Case

- For most executives, SAP S/4HANA isn't "just an upgrade"—it's a once-in-a-decade reset of how the business runs.
- The stakes are high: programs can overrun and under-deliver, global landscapes and acquisitions add complexity, and there's constant pressure to bring in AI without destabilizing what already works.
- Korcomptenz is built for that reality.
- We don't start with technology; we start with your P&L and strategic goals.
- Every scope decision, design choice, integration, and AI capability is traced back to hard metrics: revenue growth, margin protection, working-capital release, risk reduction, and time-to-value.
- The result is an SAP program your CFO can stand behind—not just a system your IT team can switch on.

Our Approach: Governed, AI-Ready, ROI-First

When the stakes are high, we replace guesswork with structure.

Deep Dive Analysis (DDA)

to align scope with your operating model, KPIs, and future-state vision.

Solution design and demos

anchored in real scenarios—not “happy-path” prototypes.

AI-infused processes

using SAP Business AI, SAP BTP, and analytics to embed intelligence into finance, supply chain, and operations from day one.

The result is a predictable, compliant, enterprise-scale implementation with measurable ROI at go-live—not years later.

Outcomes You Can Expect

- Up to **50% faster** financial close
- **25% reduction** in total IT operational costs
- **40% faster** Order-to-Cash and Procure-to-Pay cycles
- **30% improvement** in operational efficiency
- **10% higher** user productivity via intuitive SAP Fiori UX

The Three Paths to S/4HANA – Chosen, Not Defaulted

We help you choose the right path based on your landscape, risk appetite, and value targets:

Greenfield – Reinvent the Core

For first-time SAP adopters or heavily customized, out-dated ERPs.

Clean-slate design, global templates, and harmonized processes for a simplified, scalable future.

Brownfield – Convert What Works

For organizations that like their core model but need S/ 4HANA innovation.

System conversion preserves history and proven customizations with minimized disruption.

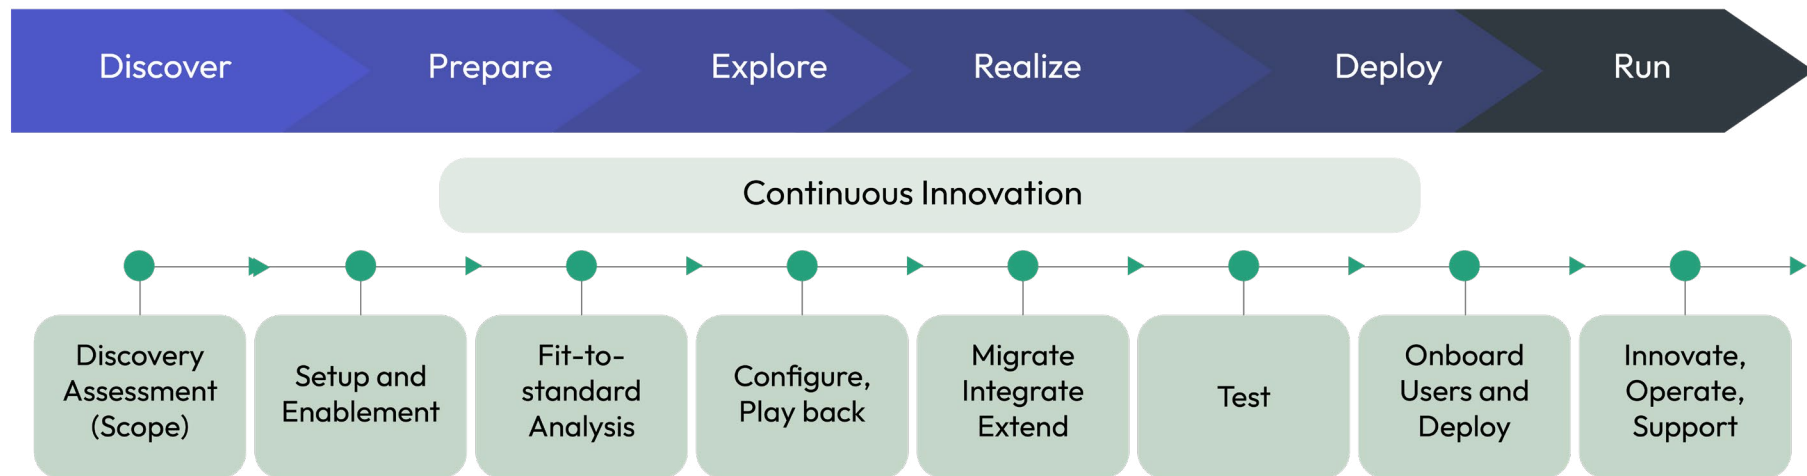

Bluefield – Hybrid on Your Terms

For those who want targeted innovation without starting over. Selectively redesign high-impact areas (finance, supply chain, analytics) while retaining stable processes and data.

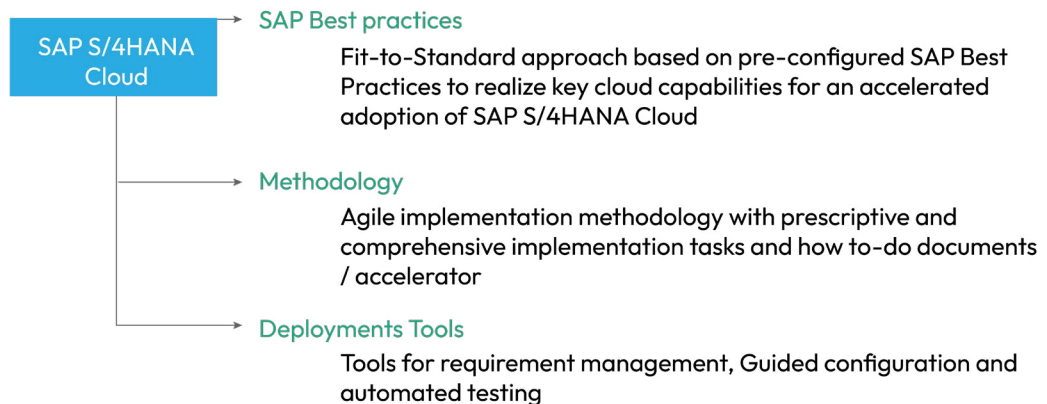

How We Deliver: SAP Activate + Cloud ALM + Automation

SAP Activate

- Is the innovation adoption framework that expedites SAP S/4HANA implementations throughout the customer lifecycle
- Supports faster, less service intensive deployments and is aiming at continuous adoption of innovations throughout the entire project lifecycle
- Supports different starting points for customers to adopt SAP S/4HANA with a new implementation

Change Adoption: Where ROI is Won or Lost

The biggest risk in any SAP program isn't the code—it's whether people actually use what you've built.

Our Organizational Change Management framework aligns leaders and business stakeholders around why change is happening and what it means for each role, then uses Fiori rolebased enablement and guided journeys to make everyday work easier, not harder.

With structured training, clear communication, and focused hypercare, teams don't just accept S/4HANA—they actively prefer it to the old way of working, which is where real ROI shows up.

Ready to Turn SAP Implementation into a Value Story?

If you're planning or rethinking your S/4HANA journey, we'll help you frame it in business terms, map it to the right path, and deliver a program that your CFO and board can stand behind.
