

# When Project Accounting Needs Enterprise Control

Solomon supported project finance. SAP S/4HANA can scale project-driven operations.

Microsoft Dynamics Solomon, later Dynamics SL, has historically served project-based organizations. For many SL customers, Business Central or another Microsoft path may be enough. SAP S/4HANA becomes relevant when project, finance, procurement, compliance, and operational needs outgrow a legacy project accounting model. SL 2018 extended support ends July 11, 2028.

## This switch makes sense when

- Project accounting is central to the business model.
- Billing, revenue recognition, cost control, or compliance is complex.
- Projects span multiple entities, regions, currencies, or business units.
- Procurement, subcontractors, resources, and finance need tighter integration.
- Project reporting relies on spreadsheets or manual consolidation.
- Leadership needs real-time project profitability and operational visibility.

## This switch may not be right when

- Project needs are moderate and fit Business Central or another Microsoft ERP.
- You mainly need cloud modernization, reporting, or support.
- Current complexity does not justify enterprise ERP.
- Budget and change capacity are limited.

## Comparison snapshot

Solomon / Dynamics SL today	SAP S/4HANA opportunity
Legacy project accounting system	Enterprise project, finance, and operations platform
Strong historical project finance use	Scalable governance for project-driven enterprises
Manual billing, reporting, or cost workarounds	Real-time project, cost, revenue, and operational visibility
Aging support model	Future-ready ERP foundation
Limited enterprise integration	Connected finance, procurement, service, supply chain, and analytics

## What this means for leaders

### CEO

Scale project-driven operations with stronger control and visibility.

### CFO

Improve project profitability, billing, revenue recognition, compliance, and cost control.

### CTO/CIO

Replace aging infrastructure and fragmented integrations with cleaner architecture.

## How Korcomptenz helps

Korcomptenz helps Solomon / SL customers assess project complexity before recommending a destination. If SAP S/4HANA is the right fit, we map project accounting, billing, cost, revenue, reporting, procurement, and finance processes to an enterprise operating model.

### Assessment-first, not rip-and-replace

SAP S/4HANA is not the right path for every Dynamics customer. Korcomptenz helps evaluate platform fit, process readiness, data quality, integrations, reporting needs, business risk, and change capacity before defining the roadmap.
