

# Acumatica & SAP S/4HANA:

## side-by-side comparison

If your organization has outgrown a flexible mid-market ERP and needs a standardized enterprise digital core, SAP S/4HANA provides deeper global process standardization, embedded operational analytics, clean-core extensibility through SAP BTP and strong alignment with enterprise SAP transformation roadmaps.

Dimension	Acumatica ERP today	SAP S/4HANA target state
<b>Strategic fit</b>	Strong for small and midsize organizations seeking cloud ERP flexibility, faster modernization and support for growth across manufacturing, distribution, retail, construction and services.	Strong for enterprises standardizing SAP as the digital core for finance, manufacturing, supply chain, procurement, sales and global operations.
<b>Manufacturing scope</b>	Supports growing manufacturers with product design, production, inventory, orders and financials in one platform.	Supports digitalized manufacturing operations with real-time visibility, intelligent decisions and responsiveness to supply-demand changes.
<b>Operational analytics</b>	Role-based dashboards and AI-powered insights help users identify and resolve issues faster.	Embedded analytics in SAP Fiori bring real-time insight and drill-down into transactional processes.
<b>Extensibility model</b>	Flexible cloud customization and workflow capabilities, with ongoing personalization and automation improvements.	Clean-core extensibility using in-app, developer and side-by-side extension patterns, including SAP BTP, to reduce core modification risk.
<b>Enterprise process standardization</b>	Good where the business values configurability, flexibility and speed without enterprise-scale complexity.	Stronger where the business needs global templates, standardized processes, controls, compliance and long-term SAP roadmap alignment.
<b>AI direction</b>	AI capabilities are advancing through anomaly detection, document handling and workflow automation.	SAP continues embedding AI into S/4HANA Cloud business processes, user experience and operational workflows.
<b>What this means for outcomes</b>	Best when the company wants flexible cloud ERP to support growth.	Best when the goal is enterprise process harmonization, real-time operational insight, clean-core extensibility and SAP-led transformation.

**Moving from Acumatica to SAP S/4HANA helps growing organizations establish an enterprise digital core, standardize global processes, embed analytics into business transactions and create a cleaner foundation for AI, automation and SAP BTP-led innovation.**
